We invite applications focused on the most common forms of pediatric brain cancer – low grade astrocytoma/glioma (LGA/LGG).

• The Pediatric Brain Tumor Foundation's PLGA Fund and the AACR are proud to announce this inaugural grant.

• The grant is intended to support the establishment of an improved understanding of the pharmacodynamics of MAPK-pathway inhibitors in pediatric LGA/LGG. The ultimate goal is to use this information to guide optimal dosing strategies in children with pediatric LGA/LGG.

• Applications are invited from researchers currently in the field as well as from investigators with experience in other areas of cancer or biomedical research who have promising ideas or approaches that can be applied to pediatric LGA/LGG. A track record of research in this specific field is not a requirement for funding.

RESEARCH GRANT TO OPTIMIZE DRUG DOSING STRATEGIES FOR PEDIATRIC LGA/LGG PATIENTS:
$180,000 over two years

ELIGIBILITY:
A collaborative research team, composed of one principal investigator and at least one collaborator from different institutions

APPLY BY:
February 18, 2020
